

MessengerAI Bot

This is an AI-powered Messenger bot built using n8n, designed to help restaurants automatically respond to customers on Facebook.

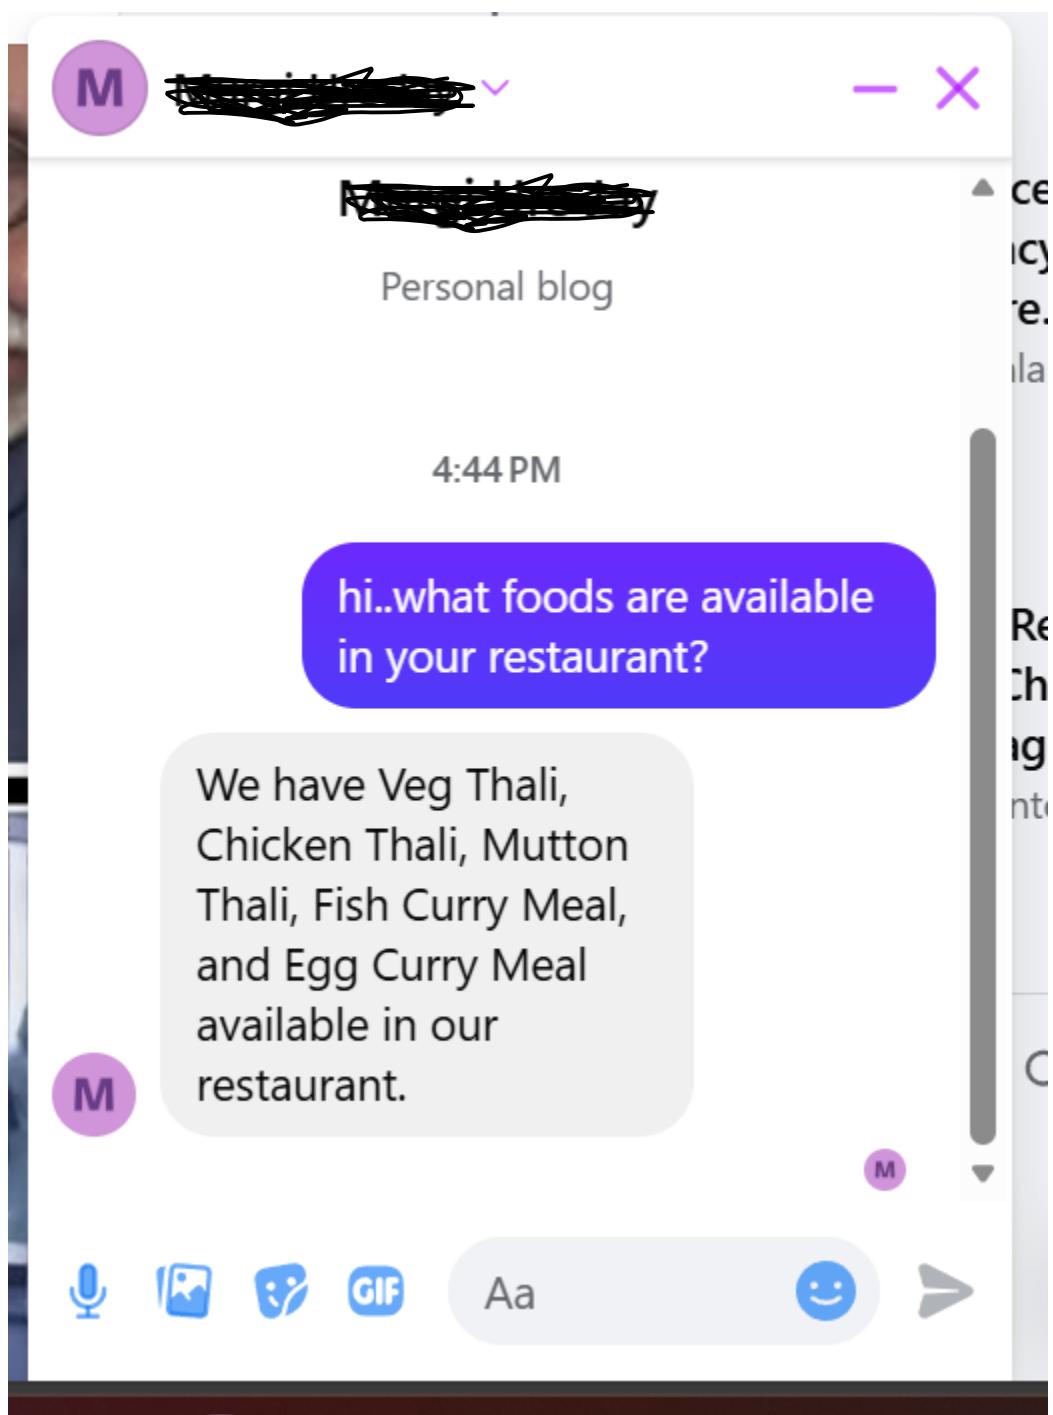

Features:

- Uses AI Agent to understand and process customer messages.
- Built using Webhook and HTTP Request nodes for smooth automation.
- Integrated with Google Sheets containing restaurant's available food items.
- Automatically replies with available items when customers ask.
- Informs the user if a requested item is not available and suggests alternatives.

1. When a customer asks for available foods, the ai agent reads through the google sheet and tells the customer about it.

A screenshot of a Google Sheets document. The spreadsheet has three columns: A, B, and C. The header row contains the column labels 'Food Item', 'Quantity', and 'Status'. Below the header, there are six rows of data. The data is as follows:

Food Item	Quantity	Status
Veg Thali	10	Available
Chicken Thali	15	Available
Mutton Thali	12	Available
Fish Curry Meal	8	Available
Egg Curry Meal	20	Available
Extra Rice	0	Out of Stock

2. When a customer asks for anything which is not available, the AI agent informs the customer about it and suggests alternatives.
